

Dear Hiring Manager,

I would express my strong interest in the Developer position at Blockscout. I was excited to learn about this opportunity as I have been using your company's main product. I am impressed by your commitment to open-source and the cool stack you employ, such as Elixir and Rust.

I am passionate about blockchain from 2020, and since then, I have dedicated myself to studying this field. This dedication was recognized when I won the National Technology Olympiad 2021 in the Blockchain Track. Following this achievement, I was invited by Innopolis University to craft the 2022 season of the Olympiad, a challenge I embraced and successfully executed.

In addition to my blockchain expertise, I have a strong interest in functional programming, having completed the elective courses in Programming Paradigms, Haskell, and Scala during my university years. These courses have given me a strong foundation in FP, which I believe will help me to quickly dive into Elixir or Rust.

While I almost do not have experience with Rust, I am eager to learn and use it in a large-scale project. To the best of my knowledge, Blockscout leverages Rust in the development of microservices, an area where my recent experience as a Site Reliability Engineer at Tinkoff and my 2+ years as a Backend developer would be highly relevant.

In conclusion, I believe that my blend of expertise in Backend, DevOps, and Blockchain, coupled with my passion for functional programming, positions me as a strong candidate for this role. I am excited about the prospect of contributing to Blockscout and look forward for your reply.

Thank you for considering my application!

Best regards,

Fedor Ivanov
