Course on Linux Command Line

STEPIK

Designed and developed course focused on simplifying complex concepts and fostering a holistic understanding of Linux. The course features numerous practical tasks with automated checks and leverages a self-hosted Online IDE for the seamless learning experience. The course is paid and is available on [Stepik](#).

Key achievements:

- Constantly receive positive feedback from the community, with nearly 1000 students enrolled in the course.
- Adopted a cloud development environment (CDE) called [Coder](#) for educational use, managing the infrastructure with tools like Ansible, Docker, Terraform, and GitLab CI/CD. The CDE is available via the [link](#).
- Engineered a microservice using Scala and the ZIO framework to integrate the CDE with Stepik LMS.

Scala Docker Linux

Bot API Mock

HASKELL COURSE

With a team, I developed a library that simulates a Bot API server, primarily used for testing a Telegram bot. This was created as the final project for the Haskell course at Innopolis University. The source code is available on [GitLab](#).

Haskell Stack Rust

Other projects

- [Project F](#): a toy, functional, LISP-like language implemented in C++. Built as a study project for the Compilers Course.
- [Anonymous Feedback](#): helps to collect feedback from students during classes in real time.
- [Dmess](#): a messenger built with Django and Vue.js.
