Software Engineer

Education

 **Bachelor in Computer Science, Software Development track**
Innopolis University

2021 - Present
Innopolis, Russia

GPA 5.0 | Awarded an increased scholarship for excellent academic achievements

 **First programming education**
Moscow School of Programmers at Yandex

2017 - 2020
Online

GPA 5.0 | Led a team for a final project that was recognized as the best in the stream

Employment History

 **Site Reliability Engineer (DWH)**
Tinkoff

2023 - Present
Innopolis, Russia

My role was to maintain high-load analytic databases and storages including GreenPlum, Hadoop, LizardFS, and ClickHouse in DWH with more than 13TB of data and 10000 DAU.

Key achievements:

- Backed the LizardFS product — automatized installation with multiple Ansible roles, enhanced observability with custom probes, alerts, runbooks, and Grafana dashboards.
- Made a substantial contribution to the ETL teams by developing a comprehensive library of Docker images for GreenPlum and LizardFS, designed to streamline automated testing within pipelines.
- Proposed alert retrospectives within the team, reducing false positives and non-critical alerts, which led to a nearly 30% reduction in total alerts, enhancing focus on significant system events.

 **Blockchain Track Lead, National Technology Olympiad**
Innopolis University

September 2021 - April 2022
Innopolis, Russia

My role was to lead the development of the Blockchain Track for the All-Russian National Technology Olympiad held in 3 stages by Innopolis University.

Key achievements:

- Crafted a comprehensive final task aimed to develop a Web 3.0 application, designed to assess participants' blockchain, backend, and frontend competencies
- Streamlined the grading process through automated checks and integration with LMS, significantly reducing workload and minimizing human error
- Gathered and managed a team of five, establishing clear goals and deadlines, adeptly handling unforeseen situations
- Successfully oversaw a season with over 1000 participants, earning commendations from both participants and management

 **Python Backend**
Promo Interactive

Summer 2021
Remote

Maintained Danone's internal tool for testing dairy products, a substantial legacy codebase inherited from a third-party company.

Python Backend
"STIL" LTD

Summer 2020
Kazan, Russia

Developed an automation system to streamline business processes within a logistics company and integrated it with many external services including 1C, Wialon, and GdePosylka.

Skills

DevOps/SRE	Docker, Linux, Bash, Ansible, Grafana, GitLab CI/CD, Prometheus, Terraform, OpenStack
Blockchain	EVM, Solidity, Blockscout API, Truffle Suite, Metamask
Backend	ZIO (Scala), Django & FastAPI (Python), Microservices, PostgreSQL
Programming	Python, Scala, Haskell, C/C++, Rust, JavaScript, Racket
Languages	English (C1)

Projects

Course on Linux Command Line

Stepik

Designed and developed course focused on simplifying complex concepts and fostering a holistic understanding of Linux. The course features numerous practical tasks with automated checks and leverages a self-hosted Online IDE for the seamless learning experience. The course is paid and is available on [Stepik](#).

Key achievements:

- Constantly receive positive feedback from the community, with nearly 1000 students enrolled in the course.
- Adopted a cloud development environment (CDE) called [Coder](#) for educational use, managing the infrastructure with tools like Ansible, Docker, Terraform, and GitLab CI/CD. The CDE is available via the [link](#).
- Engineered a microservice using Scala and the ZIO framework to integrate the CDE with Stepik LMS.

Scala Docker Linux

Bot API Mock

Haskell Course

With a team, I developed a library that simulates a Bot API server, primarily used for testing a Telegram bot. This was created as the final project for the Haskell course at Innopolis University. The source code is available on [GitLab](#).

Haskell Stack Rust

Other projects

- [Project E](#): a toy, functional, LISP-like language implemented in C++. Built as a study project for the Compilers Course.
- [Anonymous Feedback](#): helps to collect feedback from students during classes in real time.
- [Dmess](#): a messenger built with Django and Vue.js.

Certificates

2023	Diploma for excellent academic achievements , Innopolis University
2022	Commendation for development of an Olympiad , NTO Committee
2021	The winning team , NTO, Blockchain track
2020	Summer School in Blockchain , Innopolis University
2020	Certificate, with honors , Moscow Programming School at Yandex

The certificates are available in [Google Drive](#).
